MUNCK GROUP A/S

- VALUE THROUGH SUSTAINABLE INFRASTRUCTURE

Munck Group is a privately held construction company. Headquartered in central Denmark and with operations in Europe, Greenland and Africa, Munck Group employs approximately 1500 people.

Our key business areas include the installation and repair of utility lines for cable, sewage, water, fibre, gas, telecom and district heating services; all types of asphalt work, road marking and bridge renovation; as well as traffic infrastructure - such as roads and tramways, harbour and marine work, including construction activities in industrial ports and marinas, coastal protection, channel and pool dredging, and airports.

Recent international activities include a bridge and road project in northern Ghana, as well as two large-scale airport construction projects in Nuuk and Ilulissat, Greenland. These projects all place exceptionally high demands on our planning, logistics and extensive construction-engineering expertise.

Munck Group is committed to meaningful CSR and interact responsibly with customers, suppliers, authorities, employees and other stakeholders. Munck Group is an innovative, inclusive workplace with a safe and healthy working environment, that strive to ensure that all employees are thoroughly educated and trained.

Furthermore, all environmental and climate-related activities are systematically incorporated into our

production systems and processes, with the aim of minimising our impact on the external environment.

Munck Group is known for its hands-on “small-business” approach to working with customers, with owner Hans Christian Munck actively involved in day-to-day operations. Close ties with customers, quick decision making, and operational agility are key values, while the group’s considerable financial strength provides the security that customers seek in a construction partner.

CORE COMPETENCES:

- Infrastructure
- Roads and road marking
- Asphalt and surface treatment
- Sewer, gas, telecom and water pipes
- No-dig technology
- Bridge maintenance
- Marine and harbour works
- Airports
- Water supply
