

# AARSLEFF

## - INFRASTRUCTURE SPECIALISTS

The Aarsleff Group operates at an international level and has a leading position in Denmark. Our annual revenue is DKK 13.5 billion – of which 31% comes from abroad. The Group is organised in independent, competitive divisions and subsidiaries each with their own specialist expertise. Our specialist contracting expertise is combined across the Group's business units into turnkey solutions with a high degree of own production. We call this "one company", meaning that we seek and exploit synergies.

### International activities

Our international, high-level expertise makes us specialists in planning and implementing large, complex projects within infrastructure, climate change adaptation, the environment, energy and construction. We specialise e.g. in harbour and marine construction, railway work, establishment of offshore wind farms and execution of technical contracts.

We are market leaders with an international profile in pile foundation and trenchless pipe renewal, and we seek and exploit the advantages of industrialisation.

We consider ourselves as truly international contractors. We execute projects professionally, and we make a targeted effort to establish competent and competitive joint ventures that are able to tender for major international contracts.

At present, our operations cover Europe, Eastern Europe, Africa and the Far East.
