

KRÜGER A/S

- A LEADER IN SUSTAINABLE WATER TREATMENT

Krüger is an internationally oriented environmental company that supplies technologies, plants and especially knowledge about all types of water. We have gathered the most qualified staff who, on the basis of our clients' needs, industries as well as public authorities, supplies a solution which creates value – every time.

At Krüger we are dedicated to the development of new technologies to improve effectiveness and optimise operations. The innovative solutions are adapted to local needs. We add value e.g. by the recovery of energy, reuse of water, and extraction of raw materials.

Krüger A/S is a subsidiary of the Veolia Water Technologies (VWT) and is active in many countries in co-operation with sister companies or local partners.

Krüger and VWT are world leaders in engineering, design, project management and execution of construction projects for water and wastewater treatment plants. VWT also develops dedicated technological solutions and related services including operation.

CORE COMPETENCES:

Krüger focuses on sustainable development. Sustainable solutions are key drivers in all of our development projects or business areas for which Krüger is responsible. This includes among others:

- Wastewater treatment in a Biorefinery plant preserves valuable resources
- Advanced water treatment ensures healthy and safe drinking water
- Remediation of contaminated soil and ground-water prevents health problems related to this
- Landbased fishfarming allows for sustainable food production
- Digital solutions create extra value
- Climate adaptation in cities minimises flooding
- Biological solutions remove medical residues from wastewater.
